SUP-P3000

The high performance Gauge / Absolute pressure transmitter MIK-P600 is suitable to measure liquid, gas, or steam flow as well as liquid level, density and pressure. it outputs a 4~20 ma DC signal corresponding to the measured pressure. Its highly accurate and stable sensor can also measure the static pressure which can be shown on the integral indicator or remotely monitored via HART communications. Other key features include quick response, remote set-up using communications, self-diagnostics and optional status output for pressure high/low alarm.

### **Zero Adjustment Limits**

Zero can be fully elevated or suppressed, within the lower and upper range limits of the capsule.

#### **External Zero Adjustment**

External zero is continuously adjustable with 0.01% incremental resolution of span. Re-range can be done locally using the range setting switch.

#### **Mounting Position Effects**

Rotation in diaphragm plane has no effect. Tilting up to 90°C will cause Span C zero shift up to 0.25 kPa, others up to 0.15kpa, which can be corrected by the zero adjustment.

#### Output

Two wire 4~20 mADC output with digital communications, linear or square root programmable. HART FSK protocol are superimposed on the 4~20 mADC signal. Output range: 3.9 mA to 20.5 mA.

# Failure Alarm (the mode can be selected)

Low Mode (min): 3.7 mA High Mode (max): 21 mA

No Mode (hold): Keep the effective value before the fault. Note: The standard setting of failure alarm is High Mode.

#### **Response Time**

The amplifier damping constant is 0.1 sec; The sensor damping constant is 0.1~1.6 sec, it depends on the range and range compression ratio. Amplifier damping time constant is adjustable from 0.1 to 60 sec by software and added to response time.

UpTime <15s
